Election/Restrictions

This application contains inventions that are not linked to form a single general inventive concept under PCT Rule 13.1. In reply to this Office Action, Applicant is required to elect a single invention to which the claims must be restricted under 35 U.S.C. §§ 121 and 372, and 37 CFR § 1.499.

- I. Claims 1 and 2, drawn to a method of detecting ryanodine receptor antibodies
- II. Claims 3-6, drawn to a composition and kit
- III. Claims 2 and 7, drawn to a method of making a pharmaceutical composition
- IV. Claims 2 and 8, drawn to a method of prognosticating myasthenia gravis

According to PCT Rule 13.2, unity of invention exists only when the shared same or corresponding technical feature is a contribution over the prior art.

Here, the products of Invention II are used in the methods of Inventions (I or III or IV). The special technical feature linking Inventions I, II, III and IV appears to be a fusion protein "pc2" or "pc25". However, the technical feature linking Inventions I, II, III and IV does not constitute a special technical feature as defined by PCT Rule 13.2 because the technical feature does not define a contribution over the prior art. Treves *et al.*, 291 BIOCHEM. J. 757 (1993), also teach a fusion protein "pc2" (see Fig. 1). Therefore, unity of invention is lacking because the technical feature linking Inventions I, II, III and IV does not constitute a special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the prior art.

This application contains claims directed to the following species belonging to a generic invention:

- A. Select ONE protein sequence from:

Art Unit: 1641

1. SEQ. ID. NO:1; OR
2. SEQ. ID. NO:2.

Applicant is required to elect for prosecution a single species (*i.e.*, either A(1) or A(2)) to which the claims shall be restricted if no generic claim is finally held allowable. Currently, claims 1-3 and 6-8 are generic.

The species lack unity of invention because the species are not linked to form a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical feature. Specifically, the species have different chemical structures.

Upon allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Applicant is advised that a complete reply to this requirement must include: (i) an election of an Invention and species to be examined even if the requirement is traversed¹ (37 CFR 1.143), and (ii) identification of the claims encompassing the elected invention and species. An argument that claims are allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Examiner notified Applicant's representative's assistant (*i.e.*, Attorney Francis Hand's assistant) of the instant Office Action during a telephone call on March 13, 2007. The telephone call did not result in an election.

¹ Applicant may elect an invention or species with traverse or without traverse. To reserve a right to petition, Applicant must elect with traverse. Should Applicant traverse on the ground that the inventions or species are not patentably distinct, Applicant should clearly admit on the record, or submit or identify evidence on the record that the inventions or species are obvious variants. If Examiner finds one Inventions unpatentable over the prior art, Examiner may use the evidence or admission of record to reject other inventions under 35 U.S.C.103(a).
